

LSD Lab Whitepaper

Introduction :

Virtual LSD is something that many have assumed to be impossible, and a select few have attempted to create, but only one team succeeded in doing so.

Welcome to LSD Lab, where we envisioned a future of virtual experiences like never before.

A future where consumable NFTs will alter your perception through a virtual experience.

Thus, we ventured to present to the Metaverse a collection of NFTs in LSD form.

We sought out to bring you a mind-bending and unique visual experience that will add an aspect of recreation to your digital life through successfully transferring LSD onto the Ethereum blockchain.

LSD Lab is a first of its kind NFT based on real world LSD, which induces pleasant *virtual* visuals. Each LSD Lab NFT will provide a unique visual experience based on its traits.

At LSD Lab, we aim to create a platform, for like-minded individuals, that acts as a digital community all while making consumables NFTs more popular.

LSD Lab NFTs will be an integral aspect of the Metaverse being the first and the only consumable LSD in the space, and we are just getting started..

General Idea:

- LSD Lab is a collection of 5,555 unique programmatically generated virtual LSD tabs on the ethereum blockchain, with the intention of bringing the first LSD themed consumable NFT to the Metaverse.
- LSD Lab NFTs will grant each holder access to their own unique virtual world which will vary according to the traits present on their NFT. The trip environment will be built in the Metaverse and viewable in 3D VR (360°) utilizing a VR Headset, as well as in 3D through users' screens.
- Additionally, holders will be able to navigate through, discover, and interact with their surroundings utilizing a state-of-the-art interface. The simulation also offers live ASMR sounds of the holder's surroundings.
- In the long run, we plan on expanding our community even further through partnerships with several Metaverse games and communities where consuming an LSD Lab NFT will induce psychedelic color patterns and a trippy 3D effect.
- Each LSD Lab holder will also be provided access to our lab in Metaverse which will act as a hub for us to interact with each other as a community.
- Your LSD Lab NFT will serve as your digital identity in our community and the Metaverse, as well as an access key to your respective trip in our simulation.
- All LSD Lab NFTs are stored on the ERC-721 blockchain, hosted on IPFS and viewable on www.opensea.io.

Virtual Worlds

- LSD Lab's main utility is the development of our own simulation within the Metaverse, which is a gateway to 1 of our 5 unique virtual worlds that holders will be able to view in both, 3D VR (360° view) through a VR Headset, and in 3D through their screens.
- The simulation offers access to various live and interactive landscapes which vary according to the traits present on the holders LSD Lab NFT.
- A very user friendly interface will be developed for collectors to be able to easily navigate through, and interact with their surroundings.
- Each trip environment offers live sounds of the holder's surroundings such as wind blowing and rivers flowing among so many others. All the aforementioned features will render the landscape alive with mesmerizing views and sound effects.
- Our landscapes will forever be an integral part of the Metaverse which will only be accessible by LSD Lab holders.
- Regular updates for the simulation will be scheduled to maintain and improve the quality of our interface as well as to reveal new features.

Utility:

- **Our Simulation** where each LSD Lab NFT acts as an access key to 1 of our 5 unique virtual worlds, each with an immersive landscape that will allow them to navigate through, discover, and interact with their surroundings.
- **Royalties back to the Minters:** 10 Random presale minters will be chosen to share 25% of the royalties which will be airdropped to them periodically, forever.
- **LSD Laboratory in the Metaverse:** We will set up our own laboratory in the Metaverse which holders will be able to access and interact with each other as a community of virtual *psychonauts*.
- **The Community is our Number One Priority:** You are gaining membership access to a community whose benefits and offerings will continue to increase over time. One of our main focuses is to foster a connection among like minded collectors and build a tightly knit community.
- **Partnerships:** Establishing partnerships with various Metaverse games and communities, where consuming an LSD Lab NFT will induce psychedelic color patterns and a trippy 3D effect.
- **Full Commercial & Voting Rights:** LSD Lab holders will be granted full commercial rights and voting rights regarding future decisions that are to be made by the LSD Lab team.

Design:

Each LSD Lab NFT is randomly generated after combining over 110 traits with varying rarities across several trait categories including: Background, Print, Cut, Frame Design, Grade, and Trip Effect.

- All the colors and color patterns used in our digital art have been specifically chosen to provide our holders with the most aesthetically pleasing visuals. Our color palette is filled with ambient and vivid colors carefully curated for a smooth and relaxing trip.
- Each NFT has a unique print on it respective to our color palette. Accordingly, each print will indicate the virtual world in which each holder is provided access to, through our simulation.

Road map:

25%

- 10 pre-sale minters will be chosen to share 25% of the collection's royalty fees, which will be airdropped to them periodically, forever.
- LSD Lab is more than just a digital asset. Thus, to increase our notoriety outside of the digital world (IRL), 50 LSD Lab packs containing posters, stickers, and badges will be distributed among pre-sale minters.

50%

- Since we deem our presence within the Metaverse vital, we will be purchasing a piece of land in the Metaverse where we will build our own LSD laboratory, that will be accessible by LSD Lab holders to enjoy and interact with one another as a community of virtual *psychonauts*.
- LSD Lab will be creating a DAO for verified holders. All the DAO decisions will be taken with consideration to our holders' preferences, choices, and votes.

75%

- As we have mentioned several times before, our main utility is our simulation which we are very excited to develop. The simulation will feature 5 live, and interactive virtual worlds that vary according to the image (Print) present on each LSD Lab NFT. These landscapes will be viewable in both 3D VR (360° view) and on users' screens. The simulation also offers live sounds of the holder's surroundings.
- Due to the fact that the trip through our virtual worlds would be much more enjoyable in VR and because we highly value our community members, premium VR headset kits will be randomly distributed among a number of holders to increase our holders' VR accessibility.

100%

- We aim to be a pioneering figure of psychedelic recreation across the Metaverse. Hence, we will commence partnerships with various Metaverse games and communities, where consuming an LSD Lab NFT will induce psychedelic color patterns and a trippy 3D effect.
- We will make a contribution to an organization, of our holders' choice, that conducts psychedelic-assisted therapies (CPAT).
- From now on, the LSD Lab community will start taking decisions as a whole! Therefore, we will be launching the first meeting for holders to vote regarding further decisions that are to be made in accordance with the expansion of our vision.

Welcome to the future, hop on and have an awesome visual experience!
